

## **How to capture rain water for the AquaPak**

**A black Filter Cap and O-Ring is provided with the AquaPak.  
(the blue cap is only for demonstration)**

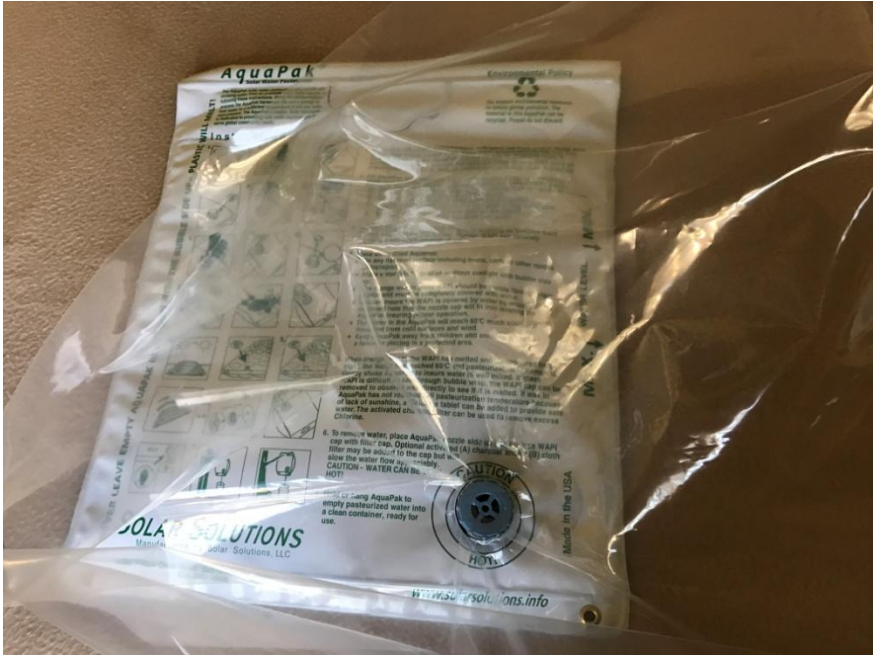

**Use any type of plastic sheet and make a whole in the plastic**

**Place the O-Ring around the plastic and Filter Cap and be sure the O-Ring is secure on the Filter Cap groove.**

**The Filter Cap can now be placed on the AquaPak**

This is how it should look when completed. Be sure to place the AquaPak in a low area with the plastic raised above the cap for rain water to flow into the cap.
